SUMMARY

Software developer with hands-on experience building AI-integrated applications using the Anthropic and OpenAI APIs, cloud-native backends on AWS, and full-stack web solutions. Demonstrated ability to design and deploy intelligent systems — from agentic pipelines to natural language assistants — with a focus on practical, real-world impact. Eager to apply AI engineering skills and prompt iteration experience to solve client problems at the intersection of business and technology.

SKILLS

Python, AWS Lambda, AWS S3, AWS SQS, REST APIs, OpenAI API, Anthropic API, React, SQL, JavaScript, Docker, Git, Linux, Prompt Engineering, Cloud Architecture

PROJECTS

Text Summarizer | June 2026

Technologies: Python, Anthropic API

- Built a Python CLI tool integrating Claude via the Anthropic API to generate structured 3-bullet summaries from arbitrary text input, demonstrating practical, production-oriented use of the Claude ecosystem
- Engineered a cost tracking layer using Anthropic's token pricing model to log per-request token consumption and cost, enabling transparent and accountable AI API usage
- Published on GitHub as part of an AI API portfolio, showcasing initiative in exploring and shipping AI-powered developer tools independently

Facial Recognition Backend | May 2025

Technologies: Python, AWS Lambda, AWS S3, AWS SQS, REST APIs

- Architected a cloud-native, asynchronous multi-stage processing pipeline on AWS to detect and compare faces against a stored dataset, demonstrating cloud engineering skills directly applicable to FDE and production deployment workflows
- Designed a modular, scalable system leveraging AWS Lambda and SQS for event-driven processing, reflecting best practices in serverless and cloud-native application architecture
- Secured cloud access and data flow across S3 and REST API layers, ensuring a production-ready, maintainable backend design

ChatGPT-Based Instruction Assistant | Sep 2023

Technologies: Python, JavaScript, REST APIs, SQL, React, OpenAI API

- Integrated the OpenAI API with an academic course database to deliver context-aware, natural language responses to student queries, illustrating end-to-end AI application development from prompt design to structured API output
- Built a full-stack solution spanning a React frontend, Python backend, and SQL data layer, demonstrating full-stack engineering capability aligned with custom application development responsibilities
- Iterated on prompt structure and API response parsing to optimize output relevance and reliability across diverse course content, directly mirroring the prompt iteration work described in the role

EXPERIENCE

Undergraduate Teaching Assistant | Arizona State University, Fulton Schools of Engineering | August 2022 - May 2024

- Led office hours and discussion sections across data structures, algorithms, digital logic, and theoretical computer science, developing strong communication and technical mentorship skills essential for client-facing consulting work
- Supported student debugging and algorithmic problem-solving in Python, Java, and C++, reinforcing a versatile software engineering foundation across multiple languages and paradigms
